

Umbrella Holder

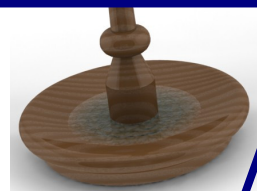

How will the average size of an umbrella effect the design of the umbrella holder?

Consider a suitable finish for the project?

Why chose this finish?

Which mounting method will we use for:

•Spindle:

•Base:

Base Design:

As moisture runs off the umbrellas, it will collect in the base of the holder

As we can see, the water will run into the joint between the base and spindle causing the joint to weaken.

How might we redesign the project to prevent this from happening?
